-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harris in view of Carman and Benderev. Harris discloses a pressure sensor 18 comprising a flexible body containing gas, gel or fluid material, and feedback unit 22, a seat part (figure 9) and signal processing devices connectable to the sensor (col. 3, lines 57 thru column 4, line 9). Harris does not disclose a transducer or the body located on a cylinder face end, vibration signal, zero position or actuator, and adjustable transducer. In an analogous reference, Carman teaches a transducer 4. It would have been obvious to one having ordinary skill in the art to modify Harris in view of Carman such that a transducer converts a signal from one form of energy to another. Benderev teaches the feedback being a vibratory signal, the flexible body being a cylinder (fig. 2), a zero position and the signal processing device connected to the sensor (col. 7, lines 10-18), time-dependent illustration of the feedback signal (col. 6, lines 16-40) and actuator (col. 7, lines 64 thru column 8, lines 1-17). As to the adjustability of the sensor and transducers, where desirable, is a modification that is within the skill of the art. In re Stevens, 212 F.2d 197, 101 USPQ 284 (CCPA 1954).
